

Trouble Shooting Credit Card Payments via Authorize payment module

When your credit card payment does not work, please check the following common root causes:

1. **The credit card limit is hit.**

Payments for LPPDE tend to be higher than common payments, so a number of customers hit the limit for the first time while paying their LPPDE registration.

2. **The address linked to the credit card is not the same as the address linked to the registration**

The address in the payment details is the one that is compared to the address known by your credit card provider.

3. **The CVV code is incorrect**

Please ensure the CVV code is applied correctly: <https://www.cvvnumber.com/>

If your credit card payment is still unsuccessful, please try any of the other payment options:

- PayPal – pay with your PayPal account or use a credit card through the PayPal payment engine (possible in most countries)
- Invoice – you will get an invoice for your registration that you can pay using wire transfer.
